CORONA AND FLOCK

HOW DOES THAT ADD UP?

CURFEW!

Corona has literally turned our lives upside down all over the world:

- ▶ Contact ban
- ▶ Production shutdown
- ▶ Curfew
- ▶ Supply fears

SHOW SOLIDARITY

We cannot prevent the virus from increasingly spreading. It is therefore all the more important to diagnose the disease in good time so that we can act and treat it in a targeted manner.

We can make our contribution.

SUCCESSFUL DIAGNOSTICS THANKS TO CHT

The foundation for a successful diagnosis is already laid at the time of sampling.

Here, flocked diagnostic swabs have proven to be very effective.

CHT has several flocking adhesives in its range which are used for flocking such test swabs.

THE ADHESIVE MAKES THE DIFFERENCE

Suitable CHT adhesives are:

- ▶ **TUBVINYL 471-3 LE**, a solvent-free product
- ▶ **TUBVINYL 472 M**, contains co-solvent
- ▶ **TUBICOLL 1410 M with TUBASSIST FIX 1060 L**, a two-component solvent adhesive

All three adhesives can be applied by dipping and are then electrostatically flocked and dried.

The demand for flocking adhesives for diagnostic kits has increased significantly. This is also reflected in the increased number of enquiries regarding suitable flocking adhesives which we are currently receiving.

HOW CAN WE HELP?

The CHT Group also offers many intelligent solutions for protective equipment.

We will be pleased to advise you comprehensively.
