BEICLEAN ECO

New ecological standards for washing textiles

EU Ecolabel

BEICLEAN ECO

The demand for a detergent for textiles of all kinds that is based on renewable raw materials is becoming ever greater.

BEICLEAN ECO is a unique innovation that meets this requirement profile.

BEICLEAN ECO is low-foaming and shows consistent, outstanding washing results in the temperature range from 40 to 60 °.

SMART SOLUTIONS-Ecology

With BEICLEAN ECO, CHT makes an efficient contribution to achieving ecological process control. The use of the product is ecologically harmless.

Recommendation for use

BEICLEAN ECO is added directly to the washing baths (prewash and main wash). The quantity used is adjusted to the degree of soiling as required.

- Use per Wash bath: 2.0 – 15.0 ml/kg
- Liquor ratio: 1:4 – 1:5
- Temperature: 40 – 60 °C
- Treatment time: approx. 20 min

Optimal product combination

BEICLEAN ECO offers optimal conditions to be combined with other products from the CHT product range.

Plant-based sustainability

The surfactants used in the formulations are 100% renewable.

Natural product for natural fiber

Cotton is a fiber that comes from nature. BEICLEAN ECO was developed to be able to wash and prepare it optimally and naturally. Due to the renewable surfactants the natural circle is closed.

Natural fibers = natural detergent.
