The mentioned recipes have been calculated based on a classical dyeing process. Since in an old-dye process a large part of the superficially fixed dyestuff is washed off during the final enzyme wash step, it is recommended increasing the amount of dyestuff: dark shades + 20 – 50 %, medium shades + 40 – 100 % and light shades + 100 – 500 %. Extremely light shades are not suitable for old-dye processes as they appear almost white after the enzyme wash.
All recipes have been formulated by colorimetry according to the corresponding PANTONE® TCX color number. The color shades printed in this brochure correspond only approximately to the PANTONE® reference and are therefore not identical to the PANTONE® number. Depending on the material and the coloring process, adjustments may be necessary.
